Mattress _____

Foundation _____

How to Measure Body Impressions

Note: **Body impressions of up to 1-1 1/2" on your mattress are possible, this is normal.** The body conforming to coils and comfort materials are beginning to work with you. Body impressions are caused by the settling of these materials as they contour to your body to provide the support where you need it most. These impressions are not indicative of structural defects or failure.

1. Place a yardstick or rod across the location of body impression(s)
2. Use a ruler to measure depth of the impression
3. Measure from the center padded area of quilting, not the seams of the quilting threads so that measurements will be accurate.
4. Take a photograph of indentation(s) or defects. And return with this form to your place of purchase.

Yardstick or rod.

Law label

Do measure impressions from the center of the padded quilting. **Do not measure from seams of quilting.** Use ruler to measure depth.

CIRCLE WHERE MATTRESS IS DEFECTIVE

MATTRESS NAME: _____

MATTRESS DEFECT:
